

Responsive Menu

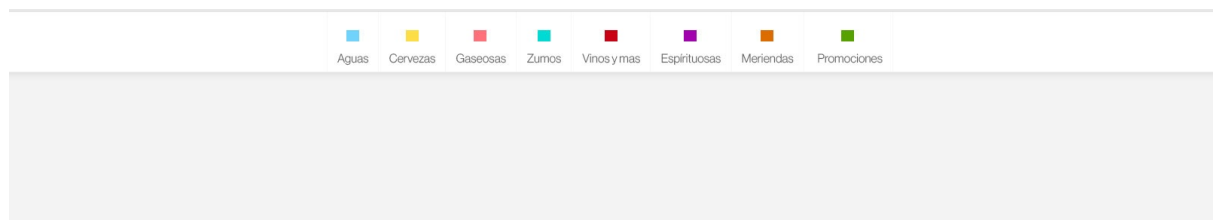

We need a responsive menu with 2 stages

Stage 1 > 1200 px screen size → Inline block menu

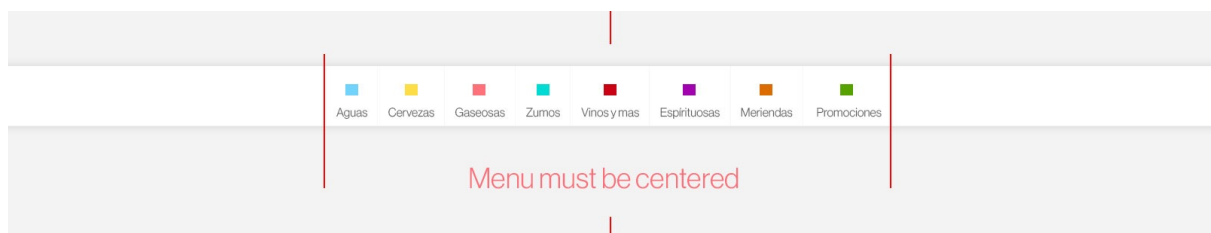

Stage2 < 1199px screen size → hamburger menu

The Menu needs to be made in html & CSS only ! No JS and no frameworks !
Transitions like opening dropdowns and changing colors need to be animated.

Stage1 > 1200 px screen size → Inline block menu

- Height of the navbar is : 80px
- The navbar is always centered by the width of the SUM of all the containing link blocks (the amount of links will vary in further production)

- the link block contains an icon and the textfield - centered with padding
left/right: 24px

Hover: When hovering over a link block of the navbar

1. the background transit to the particular color of the link block. The icon and text color switches to another predefined color (in the most cases to white)

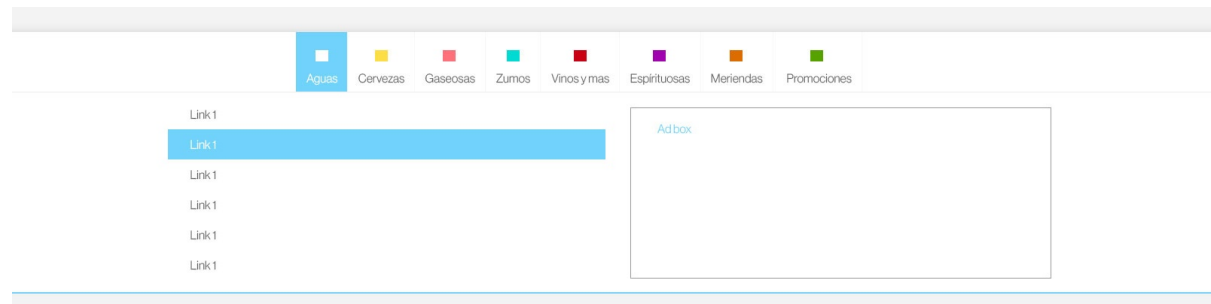

example 1

example 2

2. a fullscreen menu window drops down

min-height of the drop down is 350px

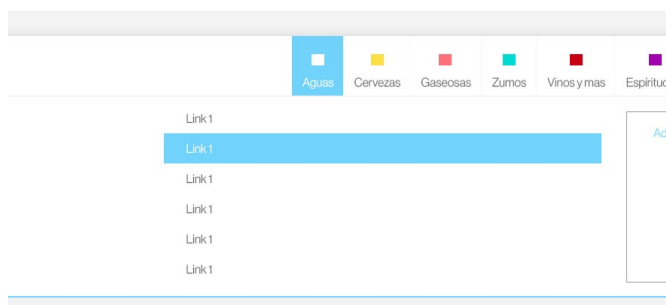

the **window** of the menu extents width 100% of the screen

the content extents on 1200px !

on the bottom of the window is a line of width 100% & height 2px in the particular color of the active drop down link

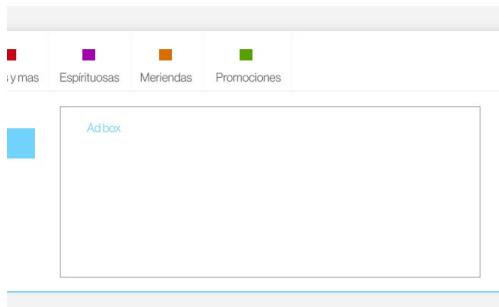

on the left side of the drop down:

- a sub menu extents to 600px (50%) of the content
- margin of the link sections are left and right is 30px
- when hovering over the link the background and text changes to the particular predefined colors

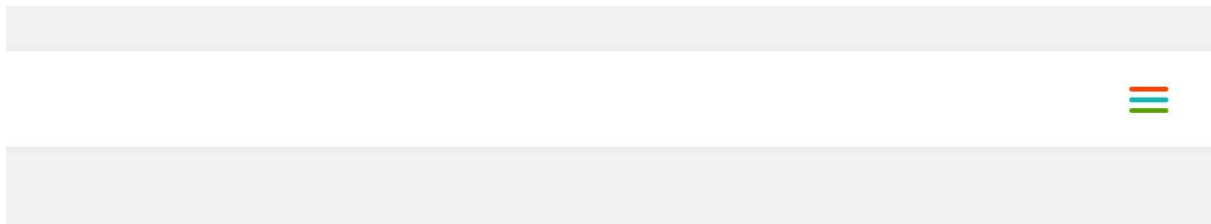

on the right side of the drop down:

- a box extents to 600px (50%) of the content
- margin left and right is 30px
- the box remains empty however in future production will contain particular content on each nav link

Stage2 < 1199px screen size → hamburger menu

from less than 1200 pixel screen size (max-width: 1199px;) the menu shall switch to mobile view:

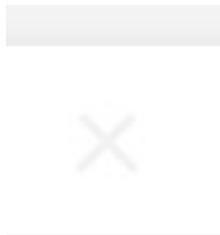

- Height of the header is : 80px

Hamburger

- the segments consist of 3 different colors

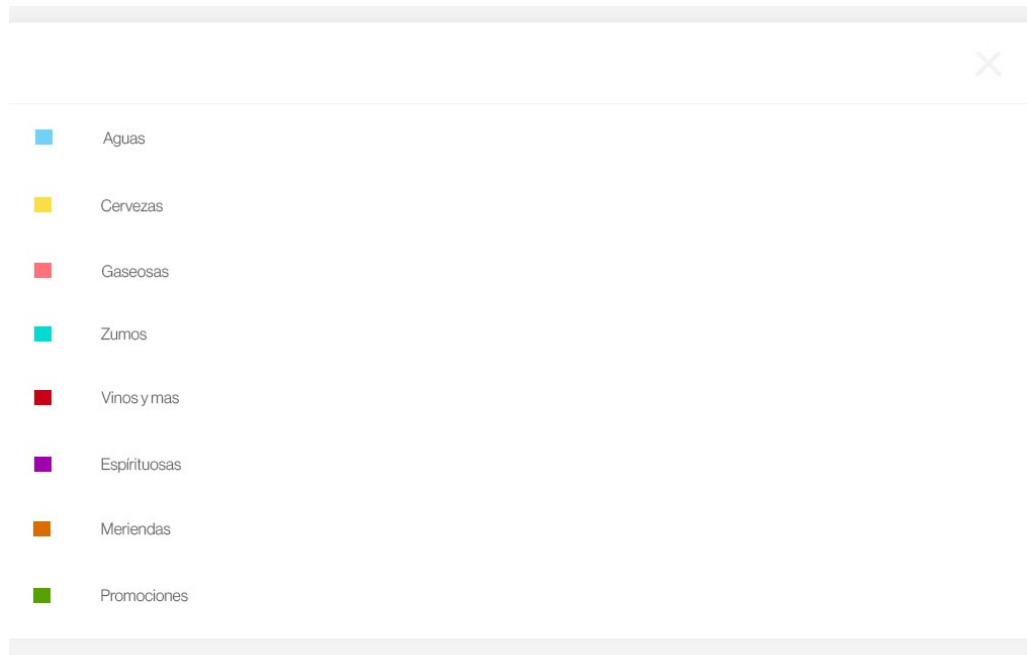

- when opening menu hamburger transits to cross, change colors to grey

when pushed on hamburger menu

- slides top down

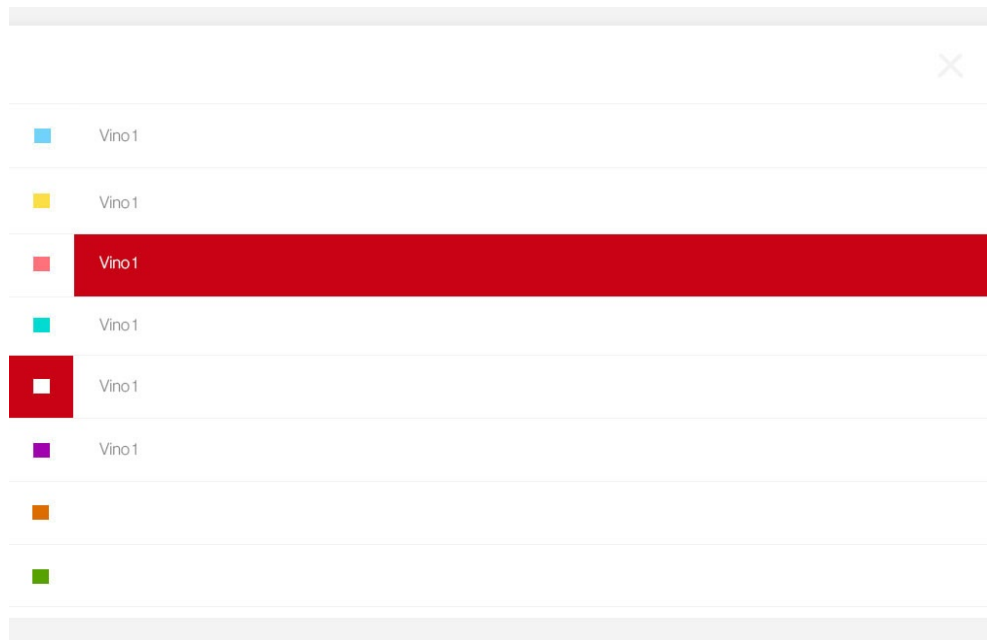

- The links are ordered top to bottom,
- height of link section is 60px
- contain the icon in its particular color and the link text

when hovering over a link:

the background transit to the particular color of the link block. The icon and text color switches to another predefined color (in the most cases to white)

When CLICKING on that link

- the icon section of the main link section remain on the left (width: 60px; height: 60px)
- a submenu unfolds right of the main menu icon section (left: 60px; right: 0px;)

General requirements

Closing menu windows shall be through clicking hamburger or outside of the menu window

make sure actions transit smoothly

Please make sure no scroll bars appear. Keep the code as clean as possible, no extra JS !

colors you find in file colors:

use any colors for testing. the colors can be right applied in further production

Colored rectangles are placeholder for iconset. However implementig icons is not part of the requirement
